

The project that we are working on deals with the fictional world of Pokemon characters which involves interactive design & animation. This project uses some interesting tags of HTML/ CSS and some animations in order to make the front end appealing and interactive.

The focus is on making a database of these characters and classifying them on various basis. This database will be used to develop Pokemon-themed games and/or quizzes, which will focus on testing the players on Pokemon trivia. There is also a plan to make a Pokemon-themed word building game for kids.

The interactive homepage is complete and other pages are in various stages of completion.
